Who We Are

- We are a global company with more than 50 years of history of innovation and excellence
- Founded in 1973, HQ in Plymouth USA and family owned
- Specialized in the manufacture and sale of high-quality liners and other types of flexible packagings solutions
- We design, engineer, manufacture, innovate, and we are a global partner company
- An industry leader, we hold the #1 market share position in Drum & Pail, and IBC Form-Fit liner market
- Production facilities in the USA, and Europe
- We are open to new ideas, flexible to customer needs, and anticipate rather than react to market trends

Global Capabilities

IBC Liner Range

Form-Fit

Benefits:

- Our unique Form-Fit design eliminates the need to handle the liners during filling as compared to pillow liners
- The 2" top fitment easily connects with the filling hose
- Easy installment with the option to fill from the top using a bridge, automatic filler or fill from the bottom for IBC's with no access doors
- Designed for maximum product evacuation with no pockets or folds to trap residual product while emptying

Pillow

Benefits:

- Easy installment with the option to fill from the top fitment, automatic filler, or fill from the bottom
- The 2" top fitment easily connects with a filling hose

Snouted

Benefits:

- CDFs snouted liner enjoys the same great benefits as our standard Form-Fit liner
- Added snout for ease of use with hard to reach filling equipment
- Ideal for aseptic applications when used with an aseptic fitment
- Perfect for use with bag-in-box aseptic fillers

Air Assist®

Benefits:

- The Air Assist® was designed with the same benefits as the Form-Fit but with the added advantage of an air bladder to improve product dispensing
- Designed for viscous products, the Air Assist design allows the product to easily dispense while improving evacuation
- As the air bladder inflates, the air pushes against the Form-Fit liner, assisting the product flow to the bottom fitment, resulting in better product dispense and less residual product left in the liner
- Designed for hands-free dispensing, once the air regulator is attached, the operator may walk away

Fitments

Several 1" and 2" Aseptic Fitments & Steamable

Exist in various versions adopted for hot and cold sterilization with different fillers. Also used for aseptic top filling.

2" Camlock & DN50 Gland

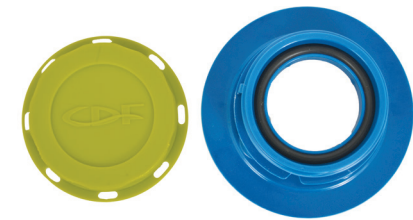

These fitments replace the traditional 2" BSP. Connect from the outside for a more sanitary connection. Form a direct connection without the use of additional adaptors and couplers.

Classic 2" and 3" BSP Gland

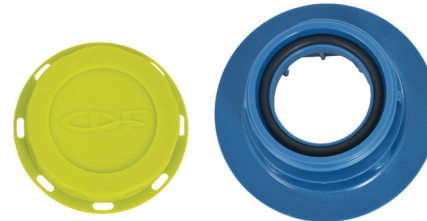

They are used for general purposes in non-aseptic applications. BSP (British Standard Pipe) is a standard that defines the design of the thread.

Verticals

Food & Beverage

Keep your product safe from filling through end-use. Trust CDF's innovative IBC liners to safely deliver and dispense base materials and ingredients, whether between facilities or dispensing in-house. Our IBC liners are ideal for liquids requiring aseptic handling or viscous products that require maximum dispensing. CDF's IBC liners are ideal for concentrated fruit, edible oils, flavorings, liquid egg, dairy, molasses, pastes, sweeteners, syrups, vinegar, and condiments.

Cosmetics

Flexible IBC liners are ideal for safely transporting beauty and personal care ingredients in packaging that offers cost savings throughout the supply chain by improving evacuation and lessening product waste. Perfect for conditioner, cream, foundation, lotion, and shampoos.

Pharmaceuticals

CDF's IBC liners offer a wide range of films and fitments for a total packaging solution that keeps pharmaceuticals protected and secure from filling transportation to dispensing.

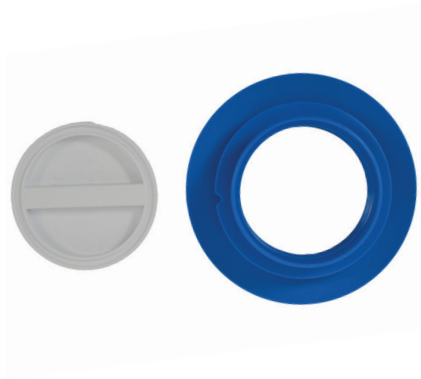

Plastic Resins & Rubber Products

Our high-barrier liners protect environmentally sensitive products from moisture, oxygen, contamination, and UV light. Ideal for dry chemicals, hygroscopic resins, engineered resins & compounds.

Chemicals

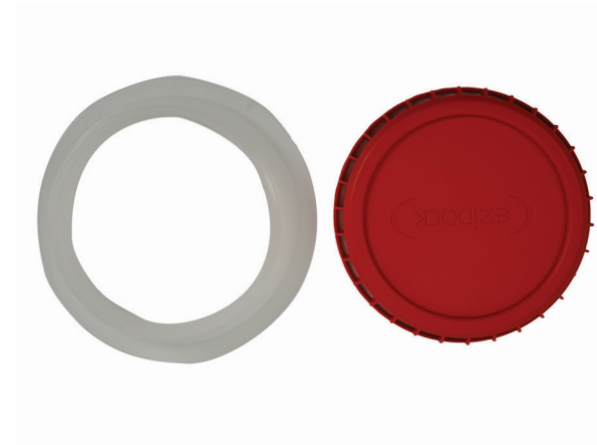

Ideal for non-hazardous goods such as adhesives, drilling additives, detergents, mechanical oils, paint, polymer emulsion, printing ink, soap, and agrochemicals.
